PERSONALITY

- ✓ Analytical thinking
- ✓ Problem solving
- ✓ Adaptability
- ✓ Communication
- ✓ Teamwork
- ✓ Willingness to learn

TECHNICAL SKILLS

Programming
Kotlin · JAVA

Database
SQL · Database Management · Database Security

Software Development
OOP · MVC · UML

Testing
Unit Testing · Quality Testing

Tools
Git · GitHub · IntelliJ IDEA · VS Code

CENTRES D'INTÉRÊT

Software Development · Back-End Development · Databases · Cybersecurity

PROFILE

Second-year Computer Science student at Nantes Université interested in back-end software development. Experience gained through academic and personal projects involving databases, object-oriented programming, software testing and application development. Familiar with Kotlin, SQL, software architecture and database management. Analytical, adaptable and motivated to develop reliable software solutions and strengthen my back-end development skills.

CURSUS

University Bachelor of Technology in Computer Science

Nantes Université – IUT de Nantes

2025 – 2028
Second-year Computer Science student.

Relevant coursework

Object-Oriented Programming	Database Management
SQL	Software Testing
Software Architecture	Systems & Networks
Web Development	UML Modelling

EXPERIENCE

Undercover Game

Personal Project

Kotlin

- Developed a functional multiplayer word deduction game using Kotlin.
- Designed UML class diagrams to organise the application architecture.
- Implemented game logic, role distribution and game states.
- Worked on unit testing to verify game behaviour and detect errors.
- **Successfully developed a functional game with role distribution and playable rounds.**

Database Management Project

Academic Project

SQL

- Created and managed relational databases using SQL.
- Designed database tables with primary and foreign keys.
- Developed SQL queries to insert, update, delete and retrieve data.
- Worked with database constraints to maintain data integrity.
- Practised database management and data manipulation techniques.

PROJECTS

Software Quality & Testing

Academic Project

Unit Testing

- Designed and implemented unit tests for software components.
- Compared expected and actual results to identify errors.
- Tested different scenarios, including normal and edge cases.
- Applied software testing principles to verify application behaviour.
- Used testing techniques to help improve code reliability.
